**PARTITIONS**

BALTIJOS BRASTA is a company with more than 20 years of experience in partition production, offering a wide range of partitions, from economy to deluxe class to high-resistance partitions.

BALTIJOS BRASTA works with the most successful Lithuanian construction companies.

Our partitions have been installed in the following objects: Presidential Palace of the Republic of Lithuania; Government of the Republic of Lithuania; Ministry of Foreign Affairs; Ministry of Agriculture; Vilnius City Municipality; M. K. Čiurlionis Museum; sports, leisure and business center Forum Palace; Siemens, Žalgiris, CIDO, and Švyturys arenas; OAZĖ, VICHY, and Druskininkai aqua parks; Vilnius and Kaunas airports; offices, factories, scientific and medical institutions, night clubs, hotels.

## MEASUREMENT AND INSTALLATION SERVICES

BALTIJOS BRASTA partitioning specialists will help you choose the most suitable option and advice in making decisions. Our team will perform measurement works in your facility in all Lithuania FREE OF CHARGE.

MORE INFORMATION Tel: +370 626 95795

The qualified specialists of BALTIC BRASTA will manufacture, deliver and install your partitions anywhere in Lithuania. We provide a 5-year warranty for installation works.

#### 4 TYPES OF PANELS ARE USED FOR PARTITION PRODUCTION:

24 mm moisture resistance MDP board coated with melamine. Several types of these partitions differ in moisture resistance and board coating. For toilet rooms, due to high humidity, wet cleaning, and other specifics of the premises, impregnated board is recommended.

**10mm high-pressure laminate with natural anodised edge profiles.** The panels are made of high-pressure laminate, which is aesthetic, completely waterproof, easy to clean, and resistant to mechanical abrasion.

For the production of panel frames, we use strong and natural grey anodized aluminium framing systems.

#### THE ADVANTAGES OF THE PARTITIONS:

**Stability and reliable performance.** 24 mm thick MDP or homogeneous 10 and 13 mm high-pressure laminate guarantees the strength and stability of the structure. Deep and strong profiles and their mounting features give the partitions additional stability and durability.

**Protection against damage.** High-pressure laminate is extremely resistant to mechanical damage. The surface of melamine-coated panels is additionally secured with a special type of melamine.

**Good aesthetics.** The flawless profiling system together with the fine MDP board laminate and door with PVC edge trim – all this gives the partitions excellent functional, aesthetic, and safety properties.

## Economy Class partitions for objects with limited budget

Partitions used for the repair of sanitary units when the budget is particularly limited. As sanitary facilities contain a significant amount of moisture due to toilets, sinks, and regular wet cleaning, the partition boards that are not moisture resistant will require extra care to prevent them from being affected by moisture.

#### MATERIALS

Aesthetic, strong, and flawless aluminium profiling system; 24 mm wood particle board (MDP); door with hinges (ASSA), internal built-in lock, handle, and latch with occupancy indication (ABLOY).

#### CONSTRUCTION

The height from the floor is 2000 mm (including leg height - 170 mm). The dimensions of the façade partitions and divider screen depths are selected according to the specifications of the premises.

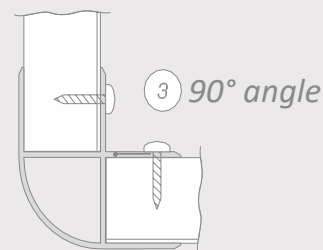

#### 24 MM MELAMINE-COATED MDP PANEL:

MDP application type - P2  
Standard - EN312:2003  
Longitudinal bending strength - 18 MPa  
Transverse bending strength - 21 Mpa  
Coating - 170-220 g/m<sup>2</sup> -

#### AVAILABLE COLOURS

#### TECHNICAL SCHEME

Great investment for simple yet representative sanitary facilities

Partitions chosen for good quality, aesthetics, and when there are no extremely high durability requirements for the partition surfaces. The moisture resistant board ensures that the partitions are resistant to high humidity environments in sanitary facilities.

#### MATERIALS

The partitions are made of a profiling system and a 24 mm moisture resistant chipboard (MDP) coated with melamine. Melamine is the regular coating of the panels. Door has hinges (ASSA), an internal built-in lock, a handle, and a latch with occupancy indication (ABLOY).

#### 24 MM MOISTURE RESISTANT MDP MELAMINE-COATED PANEL:

MDP application type - P5

Standard - EN312: 2003 Longitudinal bending strength - 21 MPa

Transverse bending strength - 22 MPa

Coating - 170-200 g / m<sup>2</sup>

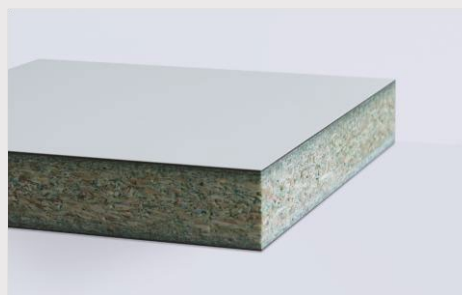

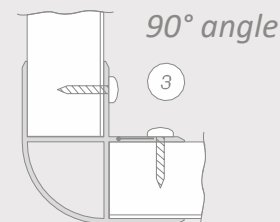

#### CONSTRUCTION

The height from the floor is 2000 mm (including leg height - 170 mm). The dimensions of the façade partitions and divider screen depths are selected according to the specifications of the premises.

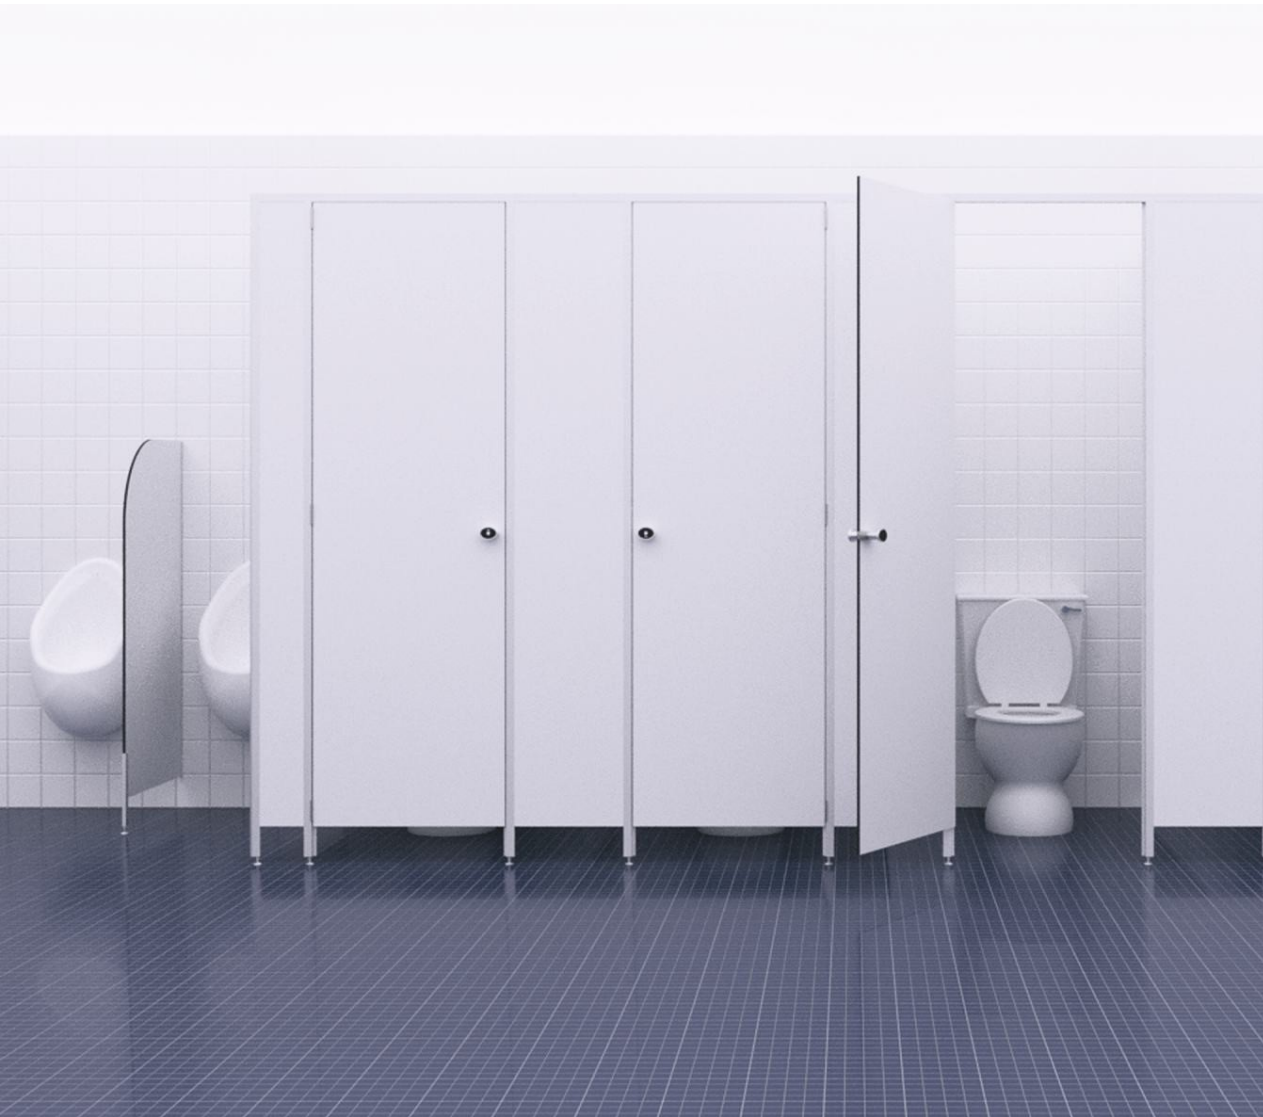

#### AVAILABLE COLOURS

#### TECHNICAL SCHEME

Great investment for shower partitions, toilet cubicles and urinary screens

Partitions - aesthetics and high quality for a reasonable price. The high-pressure laminate board is irreplaceable for high-traffic shower facilities.

#### MATERIALS

Partitions made of monolithic 10 mm high-pressure laminate, which gives the partitions all the best performance and aesthetic properties. The surface is easy to clean and resistant to mechanical damage. The special structure of the board and the fixed profiles ensure optimum strength even when a lighter (slimmer) construction is used. It is waterproof. The door has hinges (ASSA) and a lock with occupancy indication (ABLOY).

#### 10 MM WATERPROOF CONTINUOUS HIGH-PRESSURE LAMINATE:

Longitudinal bending strength - 187 MPa  
 Transverse bending strength - 187 MPa  
 Water swelling - 0.9%  
 Standard - EN-438: 2005

#### CONSTRUCTION

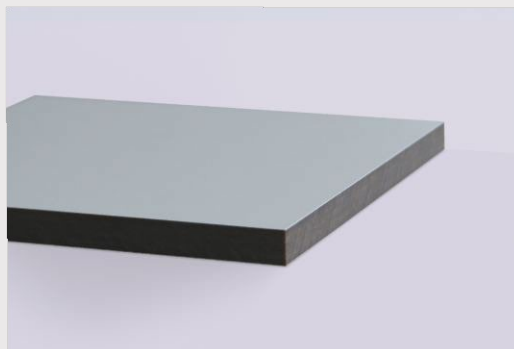

The height of the partitions from the floor is 2100 mm (including leg height - 120 mm). The dimensions of the façade partitions and divider screen depths are selected according to the specifications of the premises.

High-pressure laminate is irreplaceable for high quality toilet and shower partitions. It consists of an extremely strong, resistant to environmental factors and an easy-to-maintain polymerized phenolic resin. The high-pressure laminate does not contain chips, dust or foam pores typical to other panels. Therefore even with constant exposure to water and heat, its properties do not change and moisture does not accumulate. The material is completely non-toxic,

#### AVAILABLE COLOURS

A wide range of colours is available. For more options, please contact our team.

Great investment for exclusive design objects

Partitions with the highest requirements for aesthetics, quality, and performance. The frameless construction does not overload the partitions with unnecessary details and therefore accentuates the elegance and strength of the high-pressure laminate.

#### MATERIALS

Partitions made of monolithic 13 mm high-pressure laminate, which gives the partitions all the best performance and aesthetic properties. The surface of the partitions is easy to clean and resistant to mechanical damage. The special structure of the board and stainless steel fittings ensure optimum strength even when a lighter (thinner) construction is used. It is waterproof. The door has spring hinges and a lock with occupancy indication.

#### 13 MM WATERPROOF CONTINUOUS HIGH-PRESSURE LAMINATE:

Water swelling – 0,9 %  
Standard - EN-438:2005

#### CONSTRUCTION

The height of the partitions from the floor is 2100 mm (including leg height - 120 mm). The dimensions of the façade partitions and divider screen depths are selected according to the specifications of the premises.

High-pressure laminate is irreplaceable for high quality toilet and shower partitions. It consists of an extremely strong, resistant to environmental factors and an easy-to-maintain polymerized phenolic resin. The high-pressure laminate does not contain chips, dust or foam pores typical to other panels. Therefore even with constant exposure to water and heat, its properties do not change and moisture does not accumulate. The material is completely non-toxic,

#### COLOUR RANGE

A wide range of colours is available. For more options, please contact our team.

#### CLEANING & MAINTENANCE

The partitions are very easy to clean and maintain. Their surface is extremely smooth, wear, tear, and impact resistant.

## FITTINGS

### 3 TYPES OF FITTINGS ARE USED:

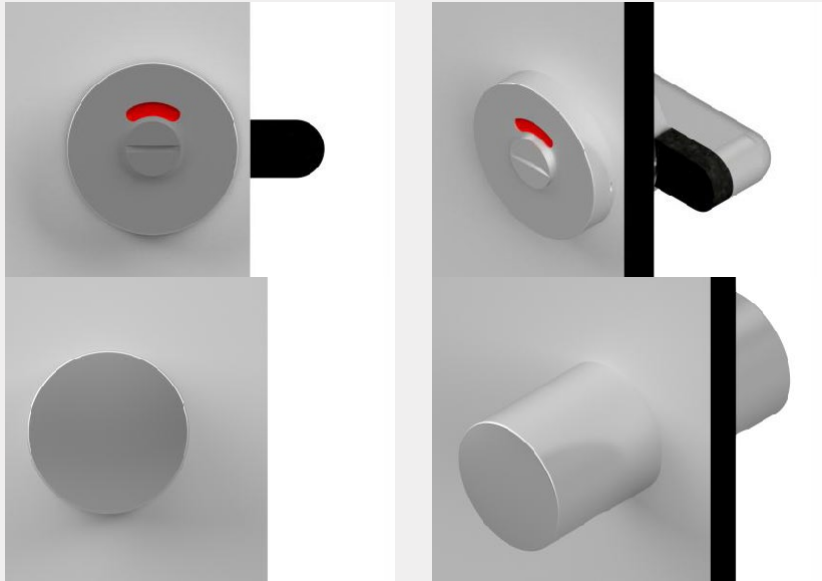

The melamine partitions have a built-in lock, a handle, and a latch with occupancy indication.

The high-pressure laminate 10mm fittings are made of stainless steel: a handle with a latch and occupancy indication.

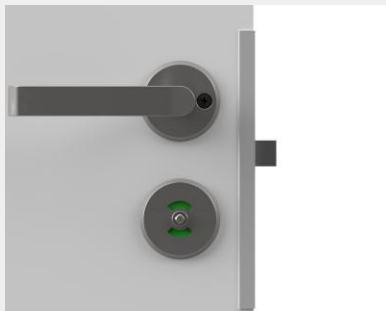

The high-pressure laminate 13mm fittings are made of stainless steel: a handle with a latch and occupancy indication.

To match your chosen board colour, we can offer non-standard colour or construction solutions.
